

Beechie et al. 2021: Impervious Area and Coho Salmon Prespawn Survivorship

Downloaded on: 2026-06-15, From: <https://mjbayly.com/stressor-response/beechie-et-al-2021-impervious-area-and-coho-salmon-prespawn-survivorship>

Function Updated by mjbayly on Tue, 02/17/2026 - 21:47.

Species Information

Common Name: Coho Salmon

Genus: *Oncorhynchus kisutch*

Stressor Details

Stressor Name: Area

Units: %

Metric: Impervious Area

Scale: linear

Function Type: continuous

Vital Rate/Process: survivorship

Life Stage & Context

Life Stages: Adults

Descriptions

Overview

The graph shows Coho salmon prespawn survivorship in each year at each site from Table 1 in Feist et al. 2011 plotted against percent impervious area. Blue line indicates the model function for prespawn survivorship.

The original graph from Beechie et al shows pre-spawn mortality, this graph was invested to show prespawn survivorship instead.

Prespawn mortality in coho salmon is correlated with a number of metrics indicating level of development (e.g., road density, percent impervious area) (Feist et al. 2011, 2017). The most straightforward function appears to be a linear relationship between prespawn mortality and percent impervious area (Figure 2a in Feist et al. 2011).

We plotted the pre-spawn survival in individual years for each site. The data are fitted well with a function of:

Percent impervious area $\leq 66.67\%$: Prespawn mortality = $(0.015) \times (\% \text{ imp. area})$

Percent impervious area $>66.67\%$: Prespawn mortality = 1.0.

Function Derivation

expert opinion

Stressor Response Data

Stressor (X)	Mean System Capacity (%)	SD	low.limit	up.limit
0	100	0	0	0
66.67	100	0	0	0
100	0	0	0	0
