

McHugh, Budy & Schaller (2004): Temperature and Chinook Fry Survivorship

Downloaded on: 2026-06-27, From: <https://mjbayly.com/stressor-response/mchugh-budy-schaller-2004-temperature-and-chinook-fry-survivorship>

Function Updated by stobias on Sat, 12/21/2024 - 01:47.

Species Information

Common Name: Chinook Salmon (stream type chinook)

Genus: *Oncorhynchus tshawytscha*

Stressor Details

Stressor Name: Temperature

Units: C

Metric: mean daily temperature

Scale: linear

Function Type: continuous

Vital Rate/Process: Survivorship

Life Stage & Context

Life Stages: Fry

Descriptions

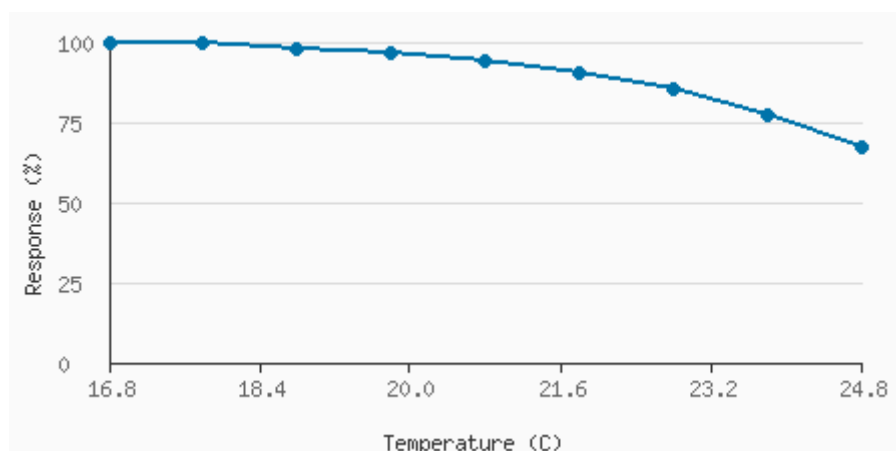

Overview

Fry stage: Survivorship through the fry stage to the overwintering stage is influenced by summer water temperatures (see reviews by McCullough, 1999; Richter & Kolmes, 2005). This survivorship function is developed for stream-type chinook by McHugh, Budy & Schaller (2004) based on data from Brett (1952), McCormick, Hokanson & Jones (1972), and Coutant (1973):

$$\text{Surv} = \exp\left\{-\left(\frac{T_{\text{sum}}}{27.0271}\right)^{10.74}\right\} \text{ if } T_{\text{sum}} > 17.8$$
$$\text{Surv} = 1 \text{ if } T_{\text{sum}} \leq 17.8$$

Where T_{sum} is mean daily temperature (°C) August–September.

Stressor Response Data

Stressor (X)	Mean System Capacity (%)	SD	low.limit	up.limit
16.8	100	0	0	100
17.8	100	0	0	100

18.8	97.99306031	0	0	100
19.8	96.52463997	0	0	100
20.8	94.17225078	0	0	100
21.8	90.53576285	0	0	100
22.8	85.13336276	0	0	100
23.8	77.47479759	0	0	100
24.8	67.22759619	0	0	100
