Species Information

Common Name: Rainbow Trout

Genus: *Oncorhynchus mykiss*

Stressor Details

Stressor Name: Velocity

Units: m/s

Metric: Water velocity

Scale: linear

Function Type: continuous

Life Stage & Context

Life Stages: Parr

Descriptions

Overview

Velocity suitability is maximal between 30 and 55 cm/s, which is greater than for 0+ Rainbow and similar to the WUP Delphi curve. There is good agreement in substrate utilization between the Fraser River data and all comparable data in the literature, with increasing use of larger substrates.

Velocity units converted from cm/s to m/s.
