Generic Substrate and Mountain Whitefish

Downloaded on: 2026-11-23, From: https://mjbayly.com/stressor-response/generic-substrate-and-mountain-whitefish
Function Updated by mbakken on Mon, 02/03/2025 - 19:38.

Species Information

Common Name: Mountain Whitefish
Latin Name: williamsoni
Genus: Prosopium

Stressor Details

Stressor Name: Substrate
Units: (see notes)
Metric: Substrate Class Categorical
Scale: linear
Function Type: step
Vital Rate/Process: HSI

Life Stage & Context

Life Stages: Juvenile
Geography: Washington
Activity: Rearing

Descriptions

Overview

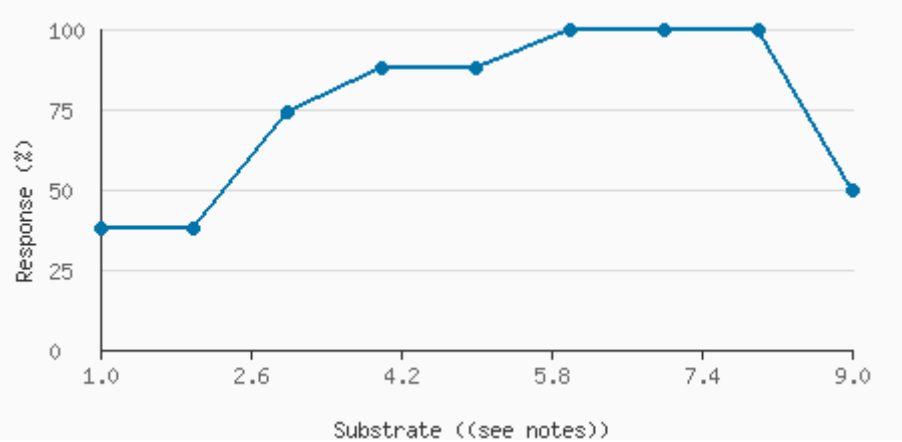

WDFW and Ecology recommended Habitat Suitability Criteria (HSC) or preference codes and values for instream flow modeling using PHABSIM or RHABSIM models. These values are based on habitat suitability studies. WDFW and/or Ecology staff (or individuals following WDFW-Ecology study guidelines) recorded the depth, velocity, substrate, and cover used by fish in a study reach.

Recommended Preferences do not always accurately reflect local conditions. Therefore, these preference values should only be used after consultation with and written agreement of WDFW and/or Ecology instream flow biologists. HSI preference curves are being revised continually as new data are obtained and analyzed. Please contact the Department of Ecology or WDFW for the most recent preference curves for salmon, trout, and other game fishes.

Cover Classes
1 - silt, clay, or organic
2 - sand
3 - sm gravel (0.1-.5")
4 - med gravel (.5-1.5")
5 - lrg gravel (1.5-3")
6 - sm cobble (3-6")
7 - lrg cobble (6-12")
8 - boulder (>12')
9 - bedrock

TABLE 17. Mountain Whitefish (Prosopium williamsoni) Juvenile Rearing Substrate Preference Data 3 sources. For the full table of 3 digit codes, use Table 9.

Stressor Response Data

Raw Stressor Values	Scaled Response Values 0 to 100	SD	low.limit	up.limit
1	38	0	0	100
2	38	0	0	100
3	74	0	0	100
4	88	0	0	100
5	88	0	0	100
6	100	0	0	100
7	100	0	0	100
8	100	0	0	100
9	50	0	0	100
